Abstract:

The present invention mainly relates to polymer based nanocomposite. In one embodiment, the present invention relates to a method of fabricating poly trimethyleit terephthalate based nanocomposite formulation for EMI Shielding, the method comprising: adding poly trimethylene terephthalate (PTT) into a mixer at a temperature for 3 minutes, adding multiwalled carbon nanotubes in to the poly trimethylene terephthalate (PTT), mixing the poly trimethylene terephthalate (PTT) and multiwalle nanotubes using a screw speed of 60 rpm in the mixer for approximately 10 minutes in order to achieve a uniform composite mixture (PTT/MWCNT) and moulding the mixture (formulation) by a compression moulding at a temperature of approximately 250°C for 3 minute at 1Pa pressure.

Complete Specification

Claims:We Claim:

1. A method of fabricating poly trimethylene terephthalate nanocomposite formulation for EMI Shielding, the method comprising: adding poly trimethylene terephthalate (PTT) into a mixer at a temperature of 230°C for 3 minutes; adding multiwalled carbon nanotubes in to the poly trimethyleneterephthalate (PTT);

mixing the poly trimethylene terephthalate (PTT) andmultiwalled carbon nanotubes using a screw speed of 60 rpm in the mixer for approximately 10 minutes in or achieve a uniform composite mixture(PTT/MWCNT); and

moulding the composite mixture (formulation) by a compression moulding at a temperature of approximately 250°C for 3 minute at 1Pa pressure.

- 2. The method as claimed in claim 1, wherein the mixer is Brabender mixer (Mixer Type 50 EHT).
- 3. The method as claimed in claim 1, wherein after adding the poly trimethylene terephthalate (PTT) into a mixer at a temperature of 230°C, the multiwalled carbonanotubes in the range of 0.05 to 3wt %as a filler is added i.e. melt mixing method.
- 4. The method as claimed in claim 1, wherein the method steps obtains the carbon nanotube reinforced poly trimethylene terephthalate (PTT) product with conti fibers presentingbetter alignment and dispersion.
- 5. The method as claimed in claim 1, wherein the method steps obtains a homogeneous morphology of poly trimethylene terephthalate (PTT) with multiwalled cannot be supported to the manufacture of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains better Electrical and EMI shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains better Electrical and EMI shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains better Electrical and EMI shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains better Electrical and EMI shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains better Electrical and EMI shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains better Electrical and EMI shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains the shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains the shielding properties of poly trimethylene terephthalate (PTT) with multiwalled carbon panotubes (MWCNT) and also obtains the shielding properties (MWCNT) and also obtains the shielding properti
